

2015-2018+ Mustang HUD

Installation Guide

Use the provided trim removal tool(s) to pry open the center dashboard trim. There are 4 clips holding the trim piece to the console. All 4 clips are located towards the front of the panel. Check where the clips are located from the new HUD unit to understand the structure underneath. **Note:** The center air vent trim do not need to be removed.

Pull open the small trim piece near your steering wheel. Run the wire from there through and out of the opened trim. Run the other side of the harness over the steering column towards the ODB2 port. Plug in the white plug into the HUD and connect the ODB2 connector. Test the HUD by switching on/off ACC. Reinstall the HUD carefully. Neatly tuck the wires away. **Note:** Do not pull too hard on the wire.
